Notes: (1) The above tables include statistics for the most recent year available.
(2) Cuba's population for 2006-15 was around 11.2 million.

*The Observatory of Economic Complexity (<<http://atlas.media.mit.edu/about>>), from which the information for most of the above tables was obtained, is an open source platform built as part of a multidisciplinary effort between the Macro Connections group at the MIT Media Lab and the Center for International Development at Harvard University. The observatory provides access to bilateral trade data for roughly 200 countries, 50 years and 1000 different products of the SITC4 revision 2 classification. The source of the data is The Center for International Data housed at the Department of Economics at the University of California, Davis, and the United Nations Commodity Trade Statistics Database (UN COMTRADE) <http://comtrade.un.org/db/>.
